Biological motion is the visual system's ability to perceive object movement by connecting a few small, individual stimuli. Humans use biological motion to identify familiar activities and gestures, which is useful for social interaction. Biological motion processing is a highly routine instance of more general perceptual and attentional processes that construct global form information from ...

Synchronicity (German: Synchronizität) is a concept, first introduced by analytical psychologist Carl Jung, which holds that events are "meaningful coincidences" if they occur with no causal relationship yet seem to be meaningfully related. During his career, Jung furnished several different definitions of it. Jung defined synchronicity as an "acausal connecting (togetherness) principle ...
