In economics, an 'inverse demand function', $P = f^{-1}(Q)$, is a function that maps the quantity of output demanded to the market price (dependent variable) for that output. Quantity demanded, Q , is a function of price; the inverse demand function treats price as a function of quantity demanded, and is also called the price function. Note that the inverse demand function is not the reciprocal ...

In economics, a factor market is a market where factors of production are bought and sold, such as the labor market, the physical capital market, the market for raw materials, and the market for management or entrepreneurial resources.. Firms buy productive resources in return for making factor payments at factor prices. The interaction between product and factor markets involves the principle ...

Un oligopolio (del antiguo griego ὀλιγόπωλιος, (oligo-gos) "pocos" ἵματιον (poleo-n) "vender") es una forma de mercado en la que un mercado o industria está dominado por un pequeño número de grandes vendedores (oligopolios). Los oligopolios pueden resultar de diversas formas de colusión que reducen la competencia y conducen a precios más altos para los consumidores.
