Cheat Sheet : All Cheat Sheets in one page

The syntax of textual programming languages is usually defined using a combination of regular expressions (for lexical structure) and Backus-Naur form (for grammatical structure) to inductively specify syntactic categories (nonterminals) and terminal symbols. Syntactic categories are defined by rules called productions, which specify the values that belong to a particular syntactic category.

Syntax (programming languages) - Wikipedia

Document Description; Intel® 64 and IA-32 architectures software developer's manual volume 1: Basic architecture: Describes the architecture and programming environment of processors supporting IA-32 and Intel® 64 architectures.
