• Functional group chemistry: imines, enamines, acetals, enols, and sulfur-containing groups  
• Synthesis of pyridines Introduction Intermediates used for the construction of aromatic heterocycles  
• Synthesis of aromatic heterocycles • Examples of commonly used strategies for heterocycle synthesis

### **Professor J. Stephen Clark - School of Chemistry**

Heterocyclic compounds may be classified as aliphatic and aromatic heterocycles. The aliphatic heterocycles are the cyclic analogues of amines, ethers and thioethers and their properties are influenced by the ring strain. The three and four membered aliphatic heterocyclic rings are more strained and reactive compared to five and six membered rings.

Chemistry of Heterocyclic Compounds publishes articles, letters to the Editor, reviews, and minireviews on the synthesis, structure, reactivity, and biological activity of heterocyclic compounds including natural products. The journal covers investigations in heterocyclic chemistry taking place in scientific centers of all over the world, including extensively the scientific institutions in Russia, Ukraine, Latvia, Lithuania and Belarus.

### **Chemistry of Heterocyclic Compounds - Springer**

Heterocyclic chemistry is the branch of chemistry dealing with the synthesis, properties, and applications of heterocycles. Heterocyclic derivatives, seen as a group, can be divided into two broad areas:

#### **1 Heterocyclic Compounds: An Introduction - Wiley-VCH**

Vinod K. Tiwari, in Advances in Heterocyclic Chemistry, 2012. 1 Introduction. Heterocyclic compounds constitute the largest and most varied family of organic compounds significant to almost all aspects of modern organic chemistry, medicinal chemistry, and biochemistry. Among the approximately 20 million chemical compounds identified by the end of the second millennium, more than two-thirds are fully or partially aromatic and approximately half are heterocyclic.

Nomenclature of Heterocyclic Compounds. Dr. Solomon Derese SCH 402 14 The IUPAC rules allow three nomenclatures. I. The Hantzsch-Widman Nomenclature. II. Common Names ... heterocyclic ring is labeled by the letters a, b, c, etc., starting from the atom numbered 1. Therefore side

### **Nomenclature of Heterocyclic Compounds**

A heterocyclic compound or ring structure is a cyclic compound that has atoms of at least two different elements as members of its ring. Heterocyclic chemistry is the branch of organic chemistry dealing with the synthesis, properties, and applications of these heterocycles. Examples of heterocyclic compounds include all of the nucleic acids, the majority of drugs, most biomass, and many natural and synthetic dyes.

### **Heterocyclic compound - Wikipedia**

The basic principles governing the degree and type of reactivity shown by aromatic heterocyclic compounds are similar to aliphatic and benzenoid chemistry. Aromatic compounds tend to "revert to type," i.e., return to their initial system of unsaturation, if disturbed.
