The sterile insect technique (SIT) is a method of biological insect control, whereby overwhelming numbers of sterile insects are released into the wild. The released insects are preferably male, as this is more cost-effective and the females may in some situations cause damage by laying eggs in the crop, or, in the case of mosquitoes, taking blood from humans.

Well, I might as well come clean on our spending for last year. It either went up, or way up, depending on

how you want to account for things.. Every year, this annual report seems to come out a little bit later â€“ mostly because Iâ€™m no longer all that interested in how much money we spend.
